GUIDELINES FOR SET-UP FOR WINDOWS USERS

Nice to have: 16GB RAM to run all installations and to do the programme.
Less than 16 GB RAM also works but could be a bit slower.

Make sure you have upgraded your **Windows 11 to the latest patch, Windows 10 is also fine but upgraded to latest patch.**
1. Click "Check for updates" button.
2. If there is any new updates, please download and install.

You will be added to Slack channel before your class starts, and then you will be guided with detailed instructions shared in the Slack channel for what you need to install and how to install step by step.

GUIDELINES FOR SET-UP FOR MAC USERS

If possible, get a windows computer, because we will be mainly using Microsoft Technologies and they are mostly based in the Windows environment.
Microsoft technologies are the most popular technologies nowadays used widely across the world.

Nice to have: 16GB RAM to run all installations and to do the programme. Less than 16 GB RAM also works but could be a bit slower.

For MAC computer, you can install below VMware Fusion Pro and then get Windows 11 installed in VMware Fusion Pro, below is a YouTube Video you can refer to for how to install.

[Run Windows 11 ARM for FREE on Mac | VMware Fusion PRO - YouTube](#)

You will be added to Slack channel before your class starts, and then you will be guided with detailed instructions shared in the Slack channel for what you need to install and how to install step by step in your VMware Fusion Pro Windows 11.

Please post a message in Slack channel if you have any questions about installation, the team will help you there.
